Scoring table: BLOSUM62
Gapop 10.0, Gapext 0.5
Searched: 112892 seqs, 41476328 residues

Total number of hits satisfying chosen parameters: 112892

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 100%
Listing first 45 summaries

Database: SwissProt_40:*
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TISSUB SPECIFICITY: PREDOMINANTLY FOUND IN THE PISTIL WHERE IT
FOUND IN THE OUTER FIVE LAYERS OF THE STRANDS OF TRANSMITTING
TISSUE WITHIN THE UPPER TWO-THIEDS OF THE STYLE. FOUND AT MUCH
LOWER LEVELS IN THE ANTHERS AND VEGETATIVE ORGANS.
DEVELOPMENTAL STAGE: MAXIMUM LEVELS ARE FOUND DURING ANTHESIS.
SIMILARITY: 54% IDENTICAL TO TOMATO PROTEINS P59 (AC P15722)

AAW27371;

24-MAR-1998 (first entry)

Multi-epitope peptide used as immunotherapeutic agent #3

RESULT 1

```
Peptide immuno:therapeutic agent to treat allergic diseases - contains multi-epitope peptide containing {\tt T} cell epitope regions from different allergens
                                                                                                                                                                                             Multi-epitope peptide; immunotherapeutic agent; allergic disease; T-cell epitope region; allergen; lymphocyte; immunoglobulin E.
                                            WPI; 1997-470495/43.
                                                             Dairiki K,

It comprises T cell epitope regions from 2 or more different allergens (preferably linked via arginine or lysine dimers), where the T cell epitope regions: have a positivity index greater than 100 as measured in a patient group responding to the allergen; have at least 70% reactivity with lymphocytes from patients responding to the allergen; and are not reactive with immunoglobulin E (IgE) antibodies from patients responsive to the allergen. The agent can be used to prevent and treat a wide variety of allergic diseases, e.g. by desensitisation. Side effects, e.g. those mediated by IgE, are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a multi-epitope peptide which is used as a new immunotherapeutic agent. It comprises T cell epitope regions from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
The present sequence represents a multi-epitope peptide which is used a new immunotherapeutic agent: It comprises T cell epitope regions froor more different allergens (preferably linked via arginine or lysine dimers), where the T cell epitope regions: have a positivity index greater than 100 as measured in a patient group responding to the allergen; have at least 70% reactivity with lymphocytes from patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Multi-epitope peptide;
                                                                                                          Claim
                                                                                                                                       contains multi-epitope peptide from different allergens
                                                                                                                                                                  Peptide immuno:therapeutic agent

Side effects, e.g. those mediated by IgE,
                       The present sequence represents a multi-epitope peptide which is used as a new immunotherapeutic agent. It comprises T cell epitope regions from 2 or more different allergens (preferably linked via arginine or lysine dimers), where the T cell epitope regions: have a positivity index greater than 100 as measured in a patient group responding to the allergen; have at least 70% reactivity with lymphocytes from patients responding to the allergen; and are not reactive with immunoglobulin E (IgE) antibodies from patients responsive to the allergen. The aggent can be used to prevent and treat a wide variety of allergic diseases, e.g. by desensitisation. Side effects, e.g. those mediated by IgE, are reduced.

                                                                                                                                                                              The present invention describes a peptide, its complex, derivative or its polymerizate, where the peptide (I) has a formula of: alpha1-alpha2-alpha3-alpha4-alpha5-alpha6-alpha7 where alpha1 to alpha7 = amino acid sequence selected from amino acid sequences ranging from 11-19 amino acids derived from T cell epitopes derived from cedar (japanese cedar - Cryptomeria japonica) pollen allergens. The peptide can be used in an antisugipollinosis agent. AAP59011 to AAF69062 and AAB69094 to AAB69121 represent sequences used

These peptides, plus subsequences (AAR81573-79) essenting for T-cell recognition, and homologous peptides (AAR81588-96) can be used as immunotherapeutic agents to treat or prevent cedar pollinosis, avoiding side-effects such as anaphylaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cedar pollen allergen B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel method of desensitizing a patient to a CC polypeptide allergen and comprises administering to the patient a peptide derived from the allergen where restriction to a MHC Class II molecule CC possessed by the patient can be demonstrated for the peptide and the CC possesses the MHC Class II molecule. The methods can be used for CC possesses the MHC Class II molecule. The methods can be used for CC desensitizing patients to allergens present in e.g. grass, tree and weed (including ragweed) pollens, fungi and moulds, foods, stinging insects, CC the chiromidae (non-biting midges), spiders and mites, housefly, fruit CC including ragweed) pollens, fungi and moulds, foods, stinging insects, CC fly, sheep blow fly, screw worm fly, grain weevil, silkworm, honeybee, CC renibrio molitor beetle, mammals such as cat, dog, horse, cow, pig, CC sheep, rabbit, rat, guinea pig, mice or gerbil. They can also be used to conditions involving hypersensitivity to allergens. This sequence conditions involving hypersensitivity to allergens. This sequence

RNA was prepd. and used to synthesise cDNA. The cDNA was subjected to successive rounds of PCR to yield a full length Cry j I clone. Cry j I or an antigenic fragment of it may be used for detecting, treating and preventing an allergic response to Japanese cedar pollen allergen. It is capable of modifying both the B and T cell response to Cry j I and T cell response

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence is that of the Japanese cedar pollen allergen Cry j I which contains at least two T cell epitopes. Peptide antigens derived from it can be used for the treatment and diagnosis of allergies associated with Japanese cedar pollen. The peptides have enhanced therapeutic properties but reduced side effects compared to naturally occurring allergens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cry j I; japanese cedar pollen allergen; modified; drug production;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cry j I Japanese Cedar pollen allergen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel peptides of cry j I have been modified as a part of a preformulation scheme to develop an optimised drug product for therapeutic treatment of humans suffering from allergy to Japanese cedar pollen allergen or an allergen which is immunologically cross reactive with Japanese cedar pollen allergen. Such modified peptides possess certain characteristics which render them particularly suitable for drug product formulation. Peptide fragments of Cry j I, modified and unmodified, are given in AAR82491-R82525.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 15-APR-1996

The peptide can be used in an antisugipollinosis agent. AAF59011 to AAF59062 and AAB69094 to AAB69121 represent sequences used in the exemplification of the present invention.
